### ABSTRACT

This document is the second volume in a set of five Career Education Measurement Handbooks intended to help local education personnel in measurement and evaluation. This handbook is designed to provide descriptions of an assortment of measurement instruments currently being used to assess career education objectives. A brief introduction describes the need for such a handbook, the procedures followed in developing this handbook, and the bandbook's limitations. Instructions are provided to direct the reader in using the handbook and understanding the format. The format consists of abstracts of approximately 200 career education measurement instruments. The abstracts are divided into the following eight categories: K-3 students, 4-6 students, 7-9 students, 10-12 students, 13-16 students, community persons, educators, and teachers. Each abstract discusses the purposes, qualities, target populations, and availability of the instrument reviewed. Administration time, reliability/validity data, and test examples are also included. Several lists of other helpful resources are appended. The information has been indexed by author, descriptors, and title. (BM)

### THE NATIONAL CENTER MISSION STATEMENT

The National Center for Research in Vocational Education's mission is to increase the ability of diverse agencies, institutions, and organizations to solve educational problems relating to individual career planning, preparation, and progression. The National Center fulfills its mission by:

- Generating knowledge through research
- Developing educational programs and products
- Evaluating individual program needs and outcomes
- Installing educational programs and products
- Operating information systems and sarvices
- Conducting leadership development and training programs

The work upon which this publication is based was performed pursuant to Contract NE-C-00-3-0079 with the National Institute of Education, Department of Health, Education, and Welfare. Contractors undertaking such projects under government sponsorship are encouraged to freely express their judgment in professional and technical matters. Points of view or opinions do not, therefore, necessarily represent official National Institute of Education position or policy.

### **FOREWORD**

Educators have often been criticized for viewing their role merely as dispensors of knowledge and showing a lack of concern with the application and relevance of this knowledge to their students' future lives. However, the general public he is begun to accept the idea that the educational system has a responsibility to assist all individuals in making orderly transitions to the world of work. Additionally, during the last decade, a number of innovative activities, projects, and/or programs have been developed at the federal; state, and local level in which personnel are attempting to link education and work. Among these programs and/or projects are the following examples: career education, experienced based career education (EBCE), Part D exemplary projects in vocational education, Title IV-C of the Elementary and Secondary Education Act (ESEA), Fund for the Improvement of Post Secondary Education (FIPSE), Title I and III of the Comprehensive Employment and Training Act (CETA), etc.

Personnel associated with education and work programs and projects are becoming increasingly aware of the need for information related to accountability and needed improvements. Many reports—some informal, some in the literature—indicate a wide and exciting variety of approaches to evaluating education and work linkage programs. However, the need exists for practitioners to become acquainted with evaluation ideas and materials available for particular situations.

Recognizing these trends, the Education and Work Group of the National Institute of Education (NIE) contracted with the National Center for Research in Vocational Education to develop five comprehensive "user oriented" handbooks. These Career Education Measurement Handbooks, intended to help local education personnel in measurement and evaluation, are:

- Assessing Experiential Learning in Career Education
- Career Education Measures: A Compendium of Evaluation Instruments
- Improving the Accountability of Career Education Programs: Evaluation Guidelines and Checklists
- A Guide for Improving Locally Developed Career Education Measures
- Using Systematic Observation Techniques in Evaluating Career Education

This handbook is designed to help practitioners identify measures currently available and being used to evaluate career education. Additionally, it provides potential questions to be asked when selecting career education measures.

ク

The National Center is particularly indebted to Dr. N.L. McCaslin, Project Director; Mr. Charles J. Gross, Graduate Research Associate; and Dr. Jerry P. Walker, Associate Director for Evaluation; who prepared this document. Special recognition should also be given to Ms. Carolyn Burkhart for her careful review and work in indexing and to Ms. Cheryl Lowry for her editorial review. A special note of thanks is extended to Dr. Ronald Bucknam who originally conceived this handbook series and continued his involvement through their development as Project Officer for the National Institute of Education.

Valuable advice in the original conceptualization of the handbook was received from an advisory committee composed of Dr. Robert Ebel, Michigan State University; Dr. Margaret Ferqueron, State Director of Career Education in Florida; and Ms. Deede Sharpe, Georgia Department of Education.

In an attempt to make this handbook truly "user oriented," user trials were conducted. The National Center is indebted to Mr. William Weisgerber, Michigan Department of Education. and Dr. Margaret Ferqueron who reviewed the first draft and made suggestions for improvement prior to the user trials. Additionally, credit is given to those career education practitioners who participated in the user trials prior to publication. Without their valuable assistance the utility of this handbook would have been greatly reduced. These individuals included: Mr. Richard Friedl, Coordinator of Vocational and Carner Education in Arkansas; Ms. LaVerne Kuehn Career Education Specialist in Arkansas; Mr. James L. Gautier, Coordinator Career Education in Florida; Mr. Albert Thomas, Jr., Director of Career Education in Florida; Mr. Tom Boldrey, Project Director in Illinois; Mr. Bob Komorech, Project Director in Illinois; Ms. June E. Beck, Guidance Counseior in North Dakota; Mr. Lyle C. Sorum, Assistant Superintendent for Vocational and Career Education in North Dakota; Mr. Jack F. Burr, Coordinator in Utah; Mrs. Rosamond R. Demman, Career and Vocational Education Specialist in Utah; Ms. Donna Martin. State Director for Career Education in Illinois; Mr. Emil R. Mackey, Supervisor of Career Education in Arkansas; Mr. Walter O. Faulkner, Career Education Consultant in Vermont; Ms. Hinda Birch, Career Education Coordinator in Vermont; and Mr. Barry M. Grove, Principal in Vermont.

Finally, a special note of appreciation is given to Ms. Marlene Linton, Ms. Joyce Foltz, and Ms. Debi Roof who typed the manuscript of this publication.

### INTRODUCTION

The general public and policy-makers at all levels of government have become increasingly concerned with the relationship between formal schooling and the world of work. Two major responses to this broad concern have been accountability and career education. Local citizens and boards of education are demanding that schools demonstrate how they are achieving their objectives and at what cost. This emphasis upon accountability has encouraged the development of a number of evaluation techniques and materials.

There is a also a growing concern that students make more informed career choices and obtain employment upon leaving the educational system. By early 1974, some fourteen states had legislated some form of career education (Jesser, 1975) and nearly 33 percent of this nation's 17,000 local school districts had reported some involvement with career education (McLaughlin, 1976). This widespread acceptance of career education has led to a large number of concepts, curriculum materials, and research reports, as well as greater emphasis upon adequate evaluation of education and work programs.

### Need for the Handbook

As a consequence of this growing emphasis on accountability and career education, career education project directors and practitioners like yourself need to become familiar with the evaluation measures and materials that are most appropriate to their particular circumstances. Unfortunately, career education has yet to produce its own equivalent to *The Seventh Mental Measurement Yearbook* (Buros, 1972) or *Test and Measurements in Child Development* (Johnson and Bommarito, 1971). The National Institute of Education (NIE) identified this lack of information about career education measures as an area for research and development and contracted with the National Center for Research in Vocational Education, The Ohio State University, to develop this handbook that describes instruments currently used to evaluate career education.

Career Education Measures is a handbook designed to provide descriptions of an assortment of measurement instruments currently being used to assess career education objectives. Specifically, it includes a discussion of the purposes, qualities, target populations, and availability of each instrument. It should also help you determine questions to ask when selecting the instrument appropriate for local circumstances and should assist you in being more responsive to the evaluation requirements of federal legislation. Most important, it is hoped that the handbook will help you to conduct evaluations that will result in more effective career education projects.

### Procedures Followed in Developing the Handbook

A variety of strategies were used to collect the instruments included in Career Education Measures. State directors/coordinators of career education were asked to

nominate individuals in their states who had extensive experience with such measurement efforts. These nominees were then asked to supply copies of available instrumentation that met the following criteria:

- Included in the general domain of career education
- Developed since 1968
- Required a substantial amount of development work (i.e., brief, one-shot instruments such as rating scales, activity counts, etc., were not to be included.)
- Available for use by career education practitioners.
- Accompanied by some reasonably current information on reliability and validity.

These criteria were employed to help increase the handbook's usefulness to project directors and practitioners. (However, some instruments described in the handbook do not meet all the criteria.) This basic search strategy enabled project staff to collect a large number of instruments from a great variety of individuals and institutional settings across the country. These settings were local education agencies, state departments, colleges and universities, research labs and centers, and commercial publishers/test developers. A second approach to instrument collection involved the use of the Educational Resources Information Center (ERIC) system. A computerized search was conducted to assess career education-related instrumentation in the system. A third strategy involved a review of the literature to identify instrumentation that has received prominent national attention in recent years. An example of this literature is Evaluation and Decision Making: A Functional Guide to Evaluating Career Education, published by Young and Schuh in 1975, which assessed fourteen "recommended" or "promising" instruments.

Once obtained, the instruments were abstracted by project staff and returned to their authors/publishers for comments. Their comments were reviewed and incorporated in the handbook as appropriate. Two state directors of career education, chosen with the concurrence of NIE, then reviewed the handbook. Their concerns and suggestions were incorporated and the handbook was then reviewed by approximately twenty-five local career education practitioners-developers. Based upon this review, the handbook was again revised and placed in its present form.

### Limitations

Several problems were encountered in assessing the instruments abstracted for the handbook despite the criteria upon which nominees were to select and supply instruments. There was frequently a lack of information concerning the instruments' validity and reliability and a shortage of information concerning the circumstances and conditions under which many were developed. In addition, career education instruments may have been developed since this handbook was prepared. Thus, you are cautioned to examine the abstracts carefully, review the instruments you are interested in for their appropriateness for your situation, and continually be on the alert for newer measures.

The remainder of this handbook consists of sections on:20

- How to use the handbook
- Potential questions to ask when selecting career education instruments
- Abstracts of career education instruments grouped by grade levels and target audiences of community, educators, and teachers
- Appendices citing other catalogs of helpful instruments, additional evaluation materials, and potential goals, elements or ourcomes
- Indices identifying the career education instruments abstracted in this volume title, author, and descriptor

### HOW TO USE THE HANDBOOK

Before using this handbook, you should become familiar with its overall content and structure. This orientation can probably best be accomplished by consulting the Table of Contents, reviewing the list of descriptors, and examining the format of the abstracts. The remainder of this section discusses each of these tasks.

### **Consult the Table of Contents**

You should consult the Table of Contents first to get the best picture of the handbook's overall content and organization.

### **Review the List of Descriptors**

Next, you will want to review the descriptors used to classify each of the instruments abstracted in the handbook. The complete list of descriptors used in this handbook is provided in Figure 1.

### **Examine the Format of the Abstracts**

You also need to become familiar with the format for the abstracts. A copy of the format used in abstracting the instruments is shown in Figure 2. The following is an explanation of the information provided for each of the abstracts. (In those cases in which information was not provided or available, the entry on the abstract is "Not indicated.")

TITLE: The name of the instrument as it was reported in the

materials sent to the project staff. Secondary or subtitles

are set off from the main title by a colon.

AUTHOR: The author(s) as reported to the project staff by the

individual(s) submitting the instrument. In some instances, the authors will be specific individuals and in other

cases they will be institutions or agencies.

DATE: The year in which the materials were printed. If the

instrument is copyrighted, it is noted as such in this

section.

### Format for Abstracting Instruments

TITLE:	
AUTHOR:	DATE:
AVAILABILITY:	
Publisher: Cost: ERIC:	
INSTRUMENT DESCRIPTION:	
Purpose/Content Descriptors: Number of Items: Type of Item: Intended Population: Age or Grade Level: Forms: Domain:	
EXAMPLE ITEM:	
ADMINISTRATION:	
Time: Response Mode: Scoring:	
TEST DATA:	
Reliability: Validity:	
COMMENTS:	

**AVAILABILITY:** 

The publisher, cost, and Educational Resources infor-

mation Center (ERIC) number of each of the

instruments.

Publisher:

The name and address of the individual or agency from

which the instrument is available.

Cost:

The cost of the instrument to individuals requesting it. In most instances, when the instrument is not available on a commercial basis, the user should expect to pay normal reproduction costs. In general, local and state education agencies were reluctant to place specific costs on their materials due to the unknown pricing

factors that will affect their agencies.

**ERIC:** 

The accession numbers of the instruments known to

have been placed in ERIC.

INSTRUMENT **DESCRIPTION:**  Purpose/content, descriptors, number of items, type of items, intended population, age or grade level, forms

and domain of the instrument.

Purpose and Content: A brief description (usually one or two sentences) that explains what the instrument was designed to assess.

Descriptors: elements or broad outcomes measured.

A listing of terms that characterize the substantive

Number of Items:

The total number of items on each instrument.

Type of Item:

The kinds of items (e.g., true-false, multiple choice, Likert scale, dichotomous choice, etc.) included in the

instrument.

Intended Population:

The people (e.g., students, counselors, teachers, admin-

istrators, parents, business leaders, etc.) that the

instrument was designed to assess.

Age or Grade Level:

The specific grade or age level or broader age or grade categories (e.g., adults, pre-school, secondary school,

college students, etc.) for which the instrument is

available.

Domain:

The domain (i.e., cognitive, affective, or psychomotor) that the instrument purports to measure. In some cases, (e.g., evaluating instructional materials, checklists, process forms, etc.) the notion of domain is not applicable

and therefore not listed.

8

**EXAMPLE ITEM:** 

An item selected to illustrate the type of instrument. Due to space limitations for reporting each abstract, it was not possible to include examples of each type of item

when more than one type was used on an instrument. If

the instrument was copyrighted, an item was not

included. However, an attempt was made to describe the

type of item included.

**ADMINISTRATION:** 

Information related to the time required to complete the

instrument, the method of response, and scoring

information.

Time:

The number of minutes that should be allowed for

completing the instrument.

Response Mode:

The way in which individuals may provide responses to items included on the instrument (e.g., paper-pencil, individual answer sheets, consumable booklets, etc.).

Scoring:

How a user should expect to score the instrument (e.g., hand scoring, optical scanning, etc.). Information on the availability and cost of scoring services, when available,

is also provided in this section.

TEST DATA:

Information related to the dependability and accuracy of

the instrument.

Reliability:

The consistency (dependability) with which scores on

the instrument reflect whatever they measure.

Validity:

The accuracy with which scores on the instrument

measure what they ought to measure.

COMMENTS:

Any related or background information associated with

the career education instrument which has not been

included in previous sections.

### Use of the Handbook

The way that you use this handbook will depend, to a large extent, on your intent. Perhaps you are unsure of what it is that you intend to measure and are primarily interested in knowing what is available. If this is the case, you should note that we have arranged the abstracts by the type of people the instrument is designed to assess. These abstracts are grouped as follows:

K-3 Students

4-6 Students

7-9 Students

10-12 Students

13-16 Students
Community Person:
Educators
Teachers

Merely turn to the abstract that include the people for whom you are concerned and review the types of instruments that are included.

Prior to the serious use of the handbook, you will need to have a clear understanding of the major goals and outcomes for your career education program. Most programs or projects should have developed these as one of their initial activities. If not, each state has generally developed a conceptualization of career education that describes the elements, goals, or outcomes. Additionally, the U.S. Office of Education (Hoyt, 1977) has established a list of ten learner outcomes for career education. Other projects and programs of career education are yet another source of goals, elements, or outcomes. A reference list of publications that have potential goals, elements, or outcomes is presented in Appendix C. On the other hand, you may already have in mind the goals, outcomes, or elements that you wish to assess. If this is the case, there are three major steps that you should probably follow:

- 1. Study the descriptors used to describe the instruments listed in the handbook.
- 2. Identify the location of the abstracts of potentially useful instruments from the descriptor index.
- 3. Review the abstracts of potentially useful instruments.

The remainder of this section discusses each of these steps.

### 1. Study the Descriptors Used to Describe the Instruments Listed in the Handbook

The descriptors used to classify the instruments included in this handbook were selected from the current literature related to career education. They represent the major terms being used to describe career education activities. A listing of these descriptors is in Figure 1. You should become thoroughly familiar with these terms so that you can identify those descriptors that are most relevant to the goals, elements, or outcomes of projects that you want to evaluate.

## 2. Identify the Location of the Abstracts of Potentially Useful Instruments from the Descriptor Index

Once you have chosen the appropriate descriptors, you are ready to locate the page number of the abstracts associated with each. The descriptors are listed in alphabetical order in Index B. The page numbers of related abstracts are listed opposite each descriptor.

### 3. Review the Abstracts of Potentially Useful Instruments

Each abstract identified through the Descriptor Index should then be located and reviewed for appropriateness to the program, project, or activity you want to evaluate. In reviewing the abstracts, you should check each section for appropriateness. Of particular interest in the initial review will be the purpose and content, intended population, age or grade level of the instrument users, cost, scoring procedures, reliability, and validity. We suggest that you review the abstracts for one descriptor before moving on to other descriptors and abstracts. You may obtain sample copies of the instruments from the sources indicated in the availability section of the abstract. Once you have obtained the samples of instruments you are interested in, you are ready to select the one(s) most appropriate for your use. The next section discusses major questions you may want to ask when selecting instruments.

## POTENTIAL QUESTIONS TO BE ASKED WHEN SELECTING CAREER EDUCATION INSTRUMENTS

There are a number of questions that you will want to ask when selecting career education instruments. The questions listed in this section are not meant to be exhaustive because each program or project is unique, and certain questions may be applicable only to your situation. Therefore, this section discusses those questions that seem to be appropriate in most instances.

- How appropriate is the instrument for the population I want to assess?
- How appropriate is the instrument for the purpose(s) and content of my project?
- How helpful will the results of the instrument be in improving my project?
- How realistic are the required resources for using the instrument compared to available resources?
  - · How competent are the personnel to administer and analyze the instrument?
  - How reasonable is the cost of the instrument?
  - · How available are the required equipment and materials?
- How does the time required to use the instrument compare with the time I have available?
- How valid is the instrument?
- How reliable is the instrument?
- How free of stereotyping is the instrument?
- How appropriate is the reading level?

These questions can be answered by examining a sample instrument and related materials and then rating the instrument on each of the foregoing questions you have decided is important. Figure 3 is an example of a rating form that you might use. This form can be used to rate each instrument for each of the questions deemed important to you. These questions would be rated from low to high importance (1 to 3). The scores for each career education instrument could then be totalled and the instrument rank-ordered according to your individual needs and circumstances. The remainder of this section discusses each of these questions in greater detail.

<sup>1 =</sup> Low

<sup>2 =</sup> Moderate 3 = High

### How appropriate is the instrument for the population I want to assess?

One of the first steps in reviewing an instrument should be to determine whether the persons you want to assess are similar to those that the instrument was designed to evaluate. Likewise, the relevance of the age or grade level should be established. Some examples of different categories of people for which instruments are designed are: students, parents, teachers, administrators, and business, industry, and labor personnel. Examples of various age levels include pre-school, elementary school, junior high school, senior high school, and adult. Examples of grade levels include groupings such as: K-3, 4-6, 7-9, 10-12, etc., or a specific grade level such as kindergarten, first, second, third, etc. Once the type of people and level(s) of the potential instrument have been identified, you can quickly determine whether or not to pursue its use further.

### How appropriate is the instrument for the purpose(s) and content of my project?

Another important question you should ask is, "How appropriate is the purpose and content of the instrument for the activity I want to evaluate?" Although this seems to be an obvious point, it often is overlooked in the process of selecting instruments. All too often, individuals select instruments based on the title alone and do not examine the content. You should read the written description of the instrument, whenever it is available, and each individual item so that you can determine the relevance of the instrument to your program, project, or activity.

### How helpful will the results of the instrument be for improving my project?

A third question to ask when selecting instruments is "How helpful will the type of information obtained be to me once the instrument has been administered?" If the information is not in a form that will allow you to either take corrective actions or to reinforce existing practices there, is relatively little reason to use the instrument.

Evaluation information should be useful in answering at least one of the following major questions:

- Are the important problems being addressed?
- Are the plans effective in maximizing the impact of scarce resources?
- Are the plans being carried out?
- Are the intended objectives being met?

If the information you would obtain from an instrument is not related to at least one of these questions, you should question its usefulness to your project.

Information on pupil (student) instruments can be used for placement, diagnosis, assessment, prediction, or evaluation. The use you plan to make of the information obtained from the student instruments should be enhanced by the results obtained from an evaluation of the instrument. As a result of using the instruments, the quality of the project should be improved.

evaluation. Then, you will have to determine which particular purpose that evaluation is to serve or the questions that you want the evaluation to answer.

## How realistic are the required resources for using the instrument compared to available resources?

Other questions you should ask when selecting instruments are related to the amount and level of resources required for measurement. Resources, in this case, are people, funds, equipment, and materials.

How competent are the personnel to administer and analyze the instrument? The key resource in most cases is people. No matter what you would like to do, unless you have personnel who are able to carry out the evaluation, you will probably be unsuccessful. Therefore, it is essential that you determine the type of skills, knowledge, and experience needed by those who use the instrument. Once these personnel requirements have been determined, you can then decide whether existing personnel competencies are compatible with the needs of the instrument.

How reasonable is the cost of the instrument? Although cost should not necessarily limit the evaluation effort, you will have to be concerned with efficient use of resources. In most instances, the price of the instruments themselves is minimal. However, there are often other costs, such as answer sheets, machine scoring, data analysis, etc., that you should consider. These other costs are particularly important if personnel are not available, or do not have the skills, for analyzing the results.

How available are the required equipment and materials? For all practical purposes, unless you have ready access to computer and data processing equipment, it is probably desirable to keep these requirements to a minimum.

#### How does the time required to use the instrument compare with the time I have available?

The time required to administer career education instruments is becoming an increasingly important criterion because the increased emphasis on accountability at all levels of education is causing an increase in the total number of evaluation activities in which students, teachers, and administrators are involved. This increase in the number of activities has also increased the number of minutes that are set aside for evaluation. This time usually must be taken from some other competing instructional activity. Yet, the amount of instructional time remains relatively fixed. These, and other factors, have caused teachers and administrators to question the amount of time required for evaluation and they try to ensure that activities are conducted in as efficient a manner as possible. Therefore, you need to carefully examine the time that potential career education instruments require.

### How valid is the instrument?

An instrument is valid if it measures what it is supposed to measure. The literature on test standards generally addresses four major types of validity: content, concurrent, predictive, and construct. You need to determine which of these types is most appropriate for your consideration. Each of these types will be briefly discussed in the following section.

Content validity generally refers to the representativeness of the instrument content to the topic being measured. For example, an instrument related to decision making would not be able to include all the information needed by a student to make a decision. However, it should cover an adequate sampling of information from the area. In addition, it should not include information on unrelated areas (e.g., world of work, economic understanding, self-awareness, etc.). Content validity can be established by having persons considered knowledgeable and competent in the area review the items on the instrument and comment on their relevance.

Concurrent validity addresses itself to the question of how well a score on a particular instrument agrees with a score obtained from other acceptable measures. For instance, you could establish the concurrent validity of an instrument designed to measure students' work habits by comparing their scores on the instrument with their work habits observed in actual work settings. If there is a high degree of agreement between the two, the instrument has concurrent validity.

Predictive validity refers to the ability of an instrument to predict future performance. For example, a score on an occupational awareness instrument might be able to predict whether the respondent will be satisfied with the job he/she holds at a later date. The major difference between predictive and concurrent validity is the time element: concurrent validity exists when the scores on two different instruments or measures taken at about the same time relate positively (a person who gets a high score on one, gets a high score on the other, and vice versa), whereas predictive validity exists when the scores on two different instruments or measures taken at significantly different times relate positively.

Construct validity is different from other types of validity because it is concerned with theory and empirical inquiry--testing hypothesized relations. In dealing with the construct validity of an instrument designed to measure career interest, for example, you may want to know what factors account for a person's score. In other words, you would want to answer the question "What proportions of this score can be accounted for by factors (such as general knowledge of careers, attitudes toward work, and views toward the locus of authority for personal development) believed to be part of career interest?" In most instances, you will probably not be too concerned with this type of validity because establishing it is really the job of an evaluation specialist or third-party evaluator.

### How reliable is the instrument?

Reliability is generally defined by terms such as accuracy, consistency, dependability, predictability, and stability. Reliability estimates are established using a number of different formulas. These formulas can be found in basic measurement texts such as Essentials of Psychological Testing, by Lee Cronbach and Selecting an Achievement Test: Principles and Procedures, by Martin Katz. As a general rule, reliability is expressed as a decimal number ranging from 0.00 to +1.00. The closer the decimal approaches +1.00, the more reliable the test is said to be. Katz indicates that there are three kinds of reliability: internal consistency, equivalence, and test-retest. You will want to determine which of these types of reliability is most appropriate for your consideration. These three types of reliability are discussed in the following section.

Internal consistency refers to the consistency of scores on different parts of the instrument taken at the same time. As a general rule, this is determined by correlating the score on odd-numbered items with scores on the even-numbered items. Another technique is to compare the score on the first half of the instrument with the score on the last half of the instrument.

Equivalence refers to the correlation between different forms (versions) of an instrument. In this case, the general practice is to compare scores on two separate forms of the same instrument.

Test-retest is based on the comparison of performance at one time with performance on the same instrument at a later time. In this case, pre-test scores are generally compared with post-test scores in determining test-retest reliability.

### How free of stereotyping is the instrument?

Many established views of "right and wrong" and "correct and incorrect" responses have been developed, based upon what has been the "norm" of society. Today, society is becoming more concerned that "what has been the case" is not "what should be the case." This concern has caused individuals to examine instruments more carefully in light of stereoty in and its potential influence upon outcomes. In particular, you should be concerned with sex stereotyping and ethnic stereotyping. Do not limit yourself to reviewing the instruments only. Consideration should also be given to a review of the accompanying manuals, materials, and reporting formats. For student instruments, you should also give careful thought no will interpret the results and how the results will be interpreted. The remainder of ection will discuss sex and ethnic stereotyping.

Sex stereotyping refers to the attribution of behaviors, abilities, interests, values, and roles to a person or a group of persons on the basis of their sex.

Ethnic stereotyping, similarly, is the attribution of behaviors, abilities, interests, values, and roles to a person or a group of persons on the basis of their ethnic background.

### How appropriate is the reading level?

A final criterion for use in selecting instruments is the reading level. Although the reading level should be difficult enough to challenge the reader, it should not be so hard that it discourages the reader or makes the results obtained from the use of the instrument questionable. One of the best ways to determine readability is pretesting the instrument with a group that would be representative of those you expect to take it. Another method would be for you to check the readability using existing readability formulas. A number of these formulas have been developed by persons such as Rudolf Flesch (1951), John R. Bormouth (1969), Jeanne Chall and Edgar Dale (1948), and others. If you are concerned with readability you should review Readability and Reading: An Annotated Bibliography, by Edgar Dale and Barbara Seels, (1971), for additional sources of information on this topic.

### Other Questions

As indicated earlier, our list of questions to be considered when reviewing instruments is not exhaustive. There are probably other questions that will need to be established that reflect local requirements. However, the list should provide you with a basic framework for selecting instruments that are most appropriate for your use in evaluating career education projects.

### **ABSTRACTS**

The abstracts of career education instruments in this section have been arranged according to the type of people for which the evaluation instrument was intended. A total of eight (8) groups has been identified as potential respondents. Each of these groups has been identified using the following page colors:

Group	Page Color
K-3 Students	salmon
4-6 Students	blue
7-9 Students	yellow
10-12 Students	green
13-16 Students or Equivalent	cafe
Community Persons	ivory
Educators	goldenrod
Teachers	buff

In some instances the intended respondents for the instruments are broader than the specific groups identified above. In the cases where this occurs, we have placed the instrument in the group with which it was most concerned. Additionally, the title sheet for each section identifies instruments for that group that can be found in another section.

### **INSTRUMENT DESCRIPTION:**

Purpose/Content:

To measure students' opinions and feelings toward the

world of work

**Descriptors:** 

Career Awareness, Career Attitudes, Personal Values

Number of Items:

57

Type of Item:

Dichotomous choice questions and three-point response

questions

Intended Population:

Students Grades 1-3

Age or Grade Level:

1

Forms: Domain:

Affective

**EXAMPLE ITEM:** 

This is a copyrighted test; therefore, an example item is not presented. Each question in the test is followed by either three faces (one smiling, one neither smiling nor frowning, and one frowning), circles under the words yes and no, or circles under the words yes,?, or no.

### ADMINISTRATION:

Time:

No time limit indicated: Takes 30 to 45 minutes to

complete

Response Mode:

The test is designed to be group administered to

students using consumable booklets. The administrator will read the questions to students who will use crayons

to color the nose of the face or the circle that

corresponds with their feelings toward the question.

Hand scored

**AVAILABILITY:** 

Publisher:

Scholastic Testing Service, 480 Meyer Road,

Bensenville, Illinois 60106

Cost:

Reusable booklets: 20 for \$12.00; answer sheets: 50 for

\$8.50; manual: \$.60 each; scor-vue for hand scoring:

\$.50 each; machine scoring: \$.80 per student

ERIC:

INSTRUMENT DESCRIPTION:

Purpose/Content: To identify the occupational awareness level of students

Its seven subtests are concerned with student identification of occupations, occupations requiring college, personal knowledge of workers, connection between occupations and specific products, occupational status.

occupational clusters, and work attitudes

Descriptors: Career Awareness, Occupational Information, Educa-

tional Career Relationships

Number of Items:

Type of Item:

Multiple choice and dichotomous choice

Intended Population:

Students

Age or Grade Level:

Grades 4-9 (revision under way for 1977-1978 to have 2

forms one for grades 3-6 and one for grades 7-12).

Forms:

1

Domain:

Cognitive

**EXAMPLE ITEM:** This is a copyrighted test, therefore, an example item is

not presented. Students are presented with a picture. They are asked questions related to the activities of persons in the pictures and students are to identify the

correct occupation from a choice of five

**ADMINISTRATION:** 

Time:

60 to 90 minutes

Response Mode:

Paper and pencil

Scoring:

Electronically or hand scored

TEST DATA:

Reliability:

Spearman Brown coefficient 80

**AVAILABILITY:** 

Publisher:

Career Education Readiness Measurement and Research, Southern Illinois University, Box 123,

Edwardsville, Illinois 62025

Cost:

Not indicated

ERIC:

## **INSTRUMENT DESCRIPTION:**

Purpose/Content: To provide teachers with an estimate of their students'

readiness to assimilate and integrate a variety of career education experiences. CERT consists of six separate subtests, each of which measures a different dimension of career education readiness. These subtests measure student attitudes and knowledge regarding: (1) sex role stereotyping. (2) intrinsic and extrinsic reasons for working, (3) occupational esteem, (4) awareness of vocational concepts, (5) occupational responsibilities.

and (6) world of work vocabulary.

Descriptors: Stereotyping, Work Values, Personal Values, Occupa

tional Information, Work Responsibilities, Work Atti-

tudes, Equal Opportunities

Number of Items:

Type of Item:

217

Pictures, except for part six of the intermediate which

involves sentence completions with five possible response choices for each incomplete sentence

Intended Population.

Age or Grade Level:

Forms:

Students

Grades 4-6

**Domain:** Cognitive and affective

**EXAMPLE ITEM:** 

See following page

**ADMINISTRATION:** 

Time: Each of the six subtests can be administered in a

classroom setting by teachers in approximately 30

minutes, but there are no time limits

Response Mode: Teacher reads each item and identifies the response

choices. Students taking the primary form of the CERT

mark their answers on consumable test booklets. Students taking the intermediate form record their

responses on a separate answer sheet.

Scoring: Hand scored

**DATE:** 1973

Dr. Robert Tolsma

Copyright

**AVAILABILITY:** 

Publisher:

Evaluative Research Associates, 8444 Florissant, St.

Louis, Missouri 63121

Cost:

Total series costs \$46.00 (includes packages of 35) reusable booklets for each of the 10 scales). Answer

sheets cost \$47.50 for a package of 500.

ERIC:

**INSTRUMENT DESCRIPTION:** 

Purpose/Content:

To assess what students know about 10 important aspects of the world of work: (1) work awareness. (2) worker activities, (3) vocational vocabulary, (4) occupational incongruities. (5) occupational similarities. (6) occupational tools, (7) ability to relate an individual's interests, abilities, and hobbies to possible occupations. (8) working conditions, (9) occupational training, and

(10) workers' earnings

Descriptors:

Job Requirements, Occupational Information, Economic

Understanding

Number of Items:

200 (20 items per subtest) Multiple choice

Type of Item:

Intended Population: Age or Grade Level:

Students

Forms:

Grades 3-12, with special emphasis on grades 3-8 Ten separate scales which can be administered separ-

ately or as a battery

Domain:

Cognitive

**EXAMPLE ITEM:** 

This is a copyrighted test, therefore, an example item is not presented. Students are asked to select the best of

five possible choices

ADMINISTRATION:

Time:

Averages 20 minutes per scale or approximately three

hours for the entire battery

Response Mode:

Scoring:

Paper and pencil

Electronically scored on special answer sheets which can be purchased from the publisher. Data processing

services are available from the publisher

**TEST DATA:** 

Reliability: Alpha coefficient test reliability scores generally were

distributed in the .60s, .70s, and .80s. However, in a few

instances, primarily at the lower grade levels, the

reliability scores are low; e.g., 4th graders, subtest scores were .456/working conditions, .145/occupational train-

ing, and .565/worker's earnings.

Validity: Has been validated against three different criteria: (1)

student responses on the Career Concepts Inventory. (2) Dictionary of Occupational Titles, and (3) The

Occupational Outlook Handbook.

COMMENTS: A handbook entitled Career Education Strategies is also

available. It describes the development and administra-

tion of the test series.

The Piers-Harris Children's Self-Concept Scale

(The Way I Feel About Myself)

INSTRUMENT DESCRIPTION:

Purpose/Content:

A personality scale designed to assess students' self-

concepts

Descriptors:

Self-concept

Number of Items:

Type of Item:

Dichotomous choice students respond yes/no to a series of first person declarative questions

**Intended Population:** 

Age or Grade Level:

Students Grades 3-12

Forms: Domain:

**Affective** 

**EXAMPLE ITEM:** 

(circle one)

Lam unpopular .....yes

**ADMINISTRATION:** 

Time:

15-20 minutes

Response Mode:

Scoring:

Paper, pencil, and consumable instruments

Hand scored with scoring key. Computer scoring services are also available from CRT according to the following price schedule: 10-99 tests/\$.40 each: 100-999

tests/\$.35 each; and 1,000 or more tests/\$.30 each

TEST DATA:

Reliability:

Internal consistency (KR21) ranges fronm .78 to .93 (grades 3, 6, and 10). Internal consistency (Spearman-Brown odd-even formula) ranges from .87 to .90 (grades 6 and 10), and 4-month test-retest reliability ranges from 71

to .72 (grades 3, 6, and 10)

Validity:

Concurrent validity was established (at the .01 level) with the Lipsitt Children's Self Concept scale, socially effective behavior, and superego strength measures. Significant negative correlations (.01 level) were established with the Health Problem and Big Problems on SRA Junior Inventory measures. Correlations with teacher and peer ratings ranged from .06 (nonsignificant) to .49 (significant at the .01 level).

COMMENTS:

The CRT computer processing yields a total score and 6 subscores as well as group means and standard deviations. It is processed in output card and printout form.

## INSTRUMENT DESCRIPTION:

Purpose/Content:

To assess students' mastery of outcomes (objectives)

pertaining to attitudes and appreciation of career

success

**Descriptors:** 

Personal Values, Work Attitudes

Number of Items:

16

Multiple choice

Type of Item: Intended Population:

Students

Age or Grade Level:

Grades 7-12

Forms:

1

Domain:

Cognitive

**EXAMPLE ITEM:** 

Virginia is a typist. A problem concerning work

assignments has arisen which she believes should be taken care of immediately. Who would be the best

person to talk with about the problem?

a. a co-worker in the officeb. her immediate supervisorc. the company president

d. her husband

#### **ADMINISTRATION:**

Time:

No time limits, but is designed to be completed in one

class period

Response Mode:

Paper and pencil

Scoring:

Hand scored

#### **TEST DATA:**

Reliability:

No specific data for this test; however, in the entire Texas Career Education Measurement Series, over 37%

of the outcomes had internal consistency reliability

(Kuder-Richardson 20) greater than .50.

Validity:

No specific information was given for this test, however, the entire series was reviewed by students and professional personnel for content validity. The developers also tested the "cultural" validity to determine if ethnic origin (Mexican-American, black, and other) or sex (male or female) influenced student response.

**COMMENTS:** 

This criterion-referenced test is one in a series of 17 instruments that comprise the Texas Career Education Measurement Series. The series consists of a survey test and interrelated, yet independent, criterion-referenced category tests based on learner outcomes for career education. These outcomes were obtained through survey and validation procedures which involved a cross-section of Texas citizens.

souri 63011, or Del Monte Research Park, Monterey,

California 93940

Cost:

Test booklets (35) \$20.00 Answer sheets (35) \$4.00

ERIC:

#### INSTRUMENT DESCRIPTION:

Purpose/Content:

To measure the maturity of attitudes and competencies which are vital in making career decisions. It consists of two parts: (1) an Attitude Scale which asks respondents about their attitudes and feelings toward making a career choice and entering the world of work, and (2) a Competence Test which is concerned with knowledge about occupations and career selection decisions. The Competence Test consists of five separate sections: (1) self-appraisal. (2) occupational information, (3) goal selection, (4) planning, and (5) problem solving. A Career Maturity Profile can be constructed to provide a graphic summary of the CMI for both individual scores and group

means.

Descriptors:

Number of Items:

Type of Item:

Intended Population: Age or Grade Level:

Forms: 1

Career Decision Making

50 (Attitude Scale), 100 (Competence Test)

Dichotomous choice (Attitude Scale)

Students
Grades 6-15

Grades 6-12

Affective and cognitive

EXAMPLE ITEM:

This is a copyrighted test; therefore, an example item is not presented. The student is presented with a brief description of a person. In some questions the student is to select the answer which represents his/her thinking, the occupation of the described person, or to recommend an occupation for the person described.

## **ADMINISTRATION:**

Time:

2 1/2 hours

Response Mode:

Paper and penul

Scoring:

Can be scored locally or commercially

TEST DATA:

Reliability: Attitude Scale - Kuder Richardson Formula 20 coeffi-

cients ranged from .65 to .84. Competence Test - Kuder

Richardson Formula coefficients ranged, with two

exceptions, from .72 to .90. The two low coefficients, .58 to .63, are for problem solving in the sixth and seventh

grades.

Validity: Content, construct validity are also

discussed widely in the Theory and Research

Handbook.

a. All wants cannot be satisfied.

b. Wants are more important than needs.

c. Wants are kept small.

d. Wants will vary.

**ADMINISTRATION:** 

Time:

No time limit, but designed to be completed in one class

period

Response Mode:

Paper and pencil

Scoring:

Machine

TEST DATA:

Reliability:

No specific data for this test; however, in the entire

Texas Career Education Measurement Series, over 37% of the outcomes had internal consistency reliability

(Kuder-Richardson 20) with greater than .50.

Validity:

No specific information was given for this test; however, the entire series was reviewed by students and professional personnel for content validity. The developers also tested the "cultural" validity to determine if ethnic origin (Mexican-American, black, and other) or sex

(male or female) influenced student response.

## **COMMENTS:**

This criterion-referenced test is one in a series of 17 instruments that comprise the Texas Career Education Measurement Series. The series consists of a survey test and interrelated, yet independent, criterion-referenced category tests based on learner outcomes for career education. These outcomes were obtained through survey and validation procedures which involved a cross-section of Texas citizens.

TITLE:

Vocational Plancing Inventory (VPI) High School Predic-

tion Program

**AUTHOR:** 

John C. Flanagan,

**DATE: 1968** 

Thelma Gwinn Thurstone, Robert N. McMurry, Leonard V. Gordon, Science Research Associates,

Inc., Industrial Test Development Staff

AVAILABILITY:

Publisher:

Science Research Associates, Inc., 259 Erie Street,

Chicago, Illinois 60611

Cost: ERIC: Specimen Set \$3.05

INSTRUMENT DESCRIPTION:

Purpose/Content:

To provide individual predictions of success in major vocational curriculum areas by measuring a student's general ability, specific aptitudes, achievement, and values. The resulting test score data are transformed into estimates of the average grades a student would most probably receive in courses in specific vocational curriculum areas as well as in vocational and academic subjects as a whole. The VPI should aid students in making more appropriate choices with regard to the vocational programs they might pursue by giving them an advanced look at the grades they are likely to receive. The VPI consists of separate subtests of: pictorial reasoning, expression, assembly, memory, arithmetic, values, general ability, and mechanics. Vocational Competencies, Career Decision Making

WPLE ITEM: This is a copyrighted test: therefore, an example item is

not presented. In one section of the test students are presented with five drawings. Students are to select the

one that is different.

**ADMINISTRATION:** 

Time:

Response Mode:

Scoring:

Approximately 3 hours

Paper and pencil

Electronically scored. Individual grade prediction profiles are provided for each student. Answer sheets are scored at the Measurement Research Center in Iowa City, Iowa. Costs of the scoring service range from

\$1.32 to \$1.43 per student.

**TEST DATA:** 

Reliability:

An average reliability across curriculum areas of .93 was

computed across the total VPI.

Criterion validity discussed

COMMENTS:

Validity:

The experimental VPI test battery was administered to a nationwide sample of some 7,500 ninth-, twelfth-, and thirteenth-grade students between January and June of 1967. Information on the development of the VPI is reported in: Vocational Planning Inventory Program Manual (Chicago: Science Research Associates, Inc. 1968). A Post High School Prediction Program form of the VPI is also available for students in grades 11-13 as for well as out-of-school adults.

Houghton Mifflin Test Department, P.O. Box 1970, Iowa

City, Iowa 52240

Cost: ERIC: Examination Kit: \$3.60

INSTRUMENT DESCRIPTION:

Purpose/Content:

To collect information that will aid counselors in designing effective career guidance programs for students and to summarize the career development status of student groups in order to facilitate the evaluation of the outcomes of career development programs. The test consists of separate subsections on: (1) job knowledge, (2) preferred job characteristics, (3) career plans. (4) career planning activities, (5) career planning knowledge, (6) exploratory job experiences, and (7) items developed separately by local education agencies.

Descriptors:

Career Development, Curriculum Planning, Educational Career Relationships, Occupational Information, Occupational Interests, Career Goals, Career Planning

Number of !tems: Type of Item:

Multiple choice, matching, 3-point rating scale, checklist, 4-point rating scales, dichotomous choice

Intended Population:

Students Grades 8-12

Age or Grade Level: Forms:

Domain:

Cognitive and affective

**EXAMPLE ITEM:** 

This is a copyrighted test; therefore, an example item is not presented. Because the ACT contains a wide variety of items of different types, a single item does not provide a good perspective on item content.

\ .

**ADMINISTRATION:** 

Time:

125 minutes

Response Mode:

Paper and pencil

Scoring:

Houghton Mifflin Scoring Service at a cost of \$.84 to

\$1.05 per student

TEST DATA:

Validity:

Reliability: Internal consistency (split half reliability coefficient) for

the subscales ranged from .61 to .93 with most

correlations in the .70's and .80's.

Content validity is determined.

COMMENTS: National norms are available. Instructions are given for

both norm-referenced and criterion-referenced interpretations. A Guide for Increasing Student Career Development (Supplement 1 to Handbook) is keyed to student

scores for various areas of career development

Assessment of Student Attitudes Toward Learning

INSTRUMENT DESCRIPTION:

**Purpose/Content:** 

To reveal the skill and knowledge of a student in the following aspects of self-understanding and the extent of their awareness of the characteristics and behavior of other people: (1) understanding individual differences, (2) evaluating individual characteristics and understanding test results, (3) changing personal characteristics and behavior, (4) locating and interpreting information about self, and (5) applying knowledge about self to career opportunities

**Descriptors:** 

Self-Awareness, Self-Concept, Self-Identity

Number of Items:

60

Type of Item: Intended Population:

Multiple choice Students

Intended Population Age or Grade Level:

**Grades 10-12** 

Age of Grade L

1

Domain:

Cognitive

**EXAMPLE ITEM:** 

This is a copyrighted test; therefore, an example is not presented. Students are presented material such as an advertisement, and, based on this information, they are asked to select the best response to the question.

**ADMINISTRATION:** 

Time:

60 minutes is suggested

Response Mode:

Students mark their responses on a combination machine

scorable/self-scorable response sheet

Scoring:

The answer sheets are machine scored; however, in marking their answers, a carbon of the answer sheet is also prepared so that the students can then score them themselves. In addition to machine scoring, summary reports prepared by The College Board are available at 75 response sheets per skill minimum at \$.75 per sheet.

TEST DATA:

Reliability: Validity:

KR - 20 = .92

Not available—validity study to be completed in late 1979

**COMMENTS:** 

This measure is one of six instruments developed by The College Board and Educational Testing Service in cooperation with the states of Georgia, Maryland, Minnesota, New Jersey, and Ohio. The other five (5) instruments include:

- · Self Evaluation and Development Skills,
- Career Awareness Skills,
- Employment Seeking Skills,
- Work Effectiveness Skills, and
- Personal Economic Skills.

In addition, the following materials are also available:

- Implementing the Career Skills Assessment Program: A Handbook for Effective Program Use (\$2.75)
- Administering the Career Skills Assessment Program: Instructions for Using CSAP Measures (free with every package of booklets)
- Saved Filmstrip Kit (\$48.50). Three filmstrips plus an orientation kit and a Leader's Guide.
- Sample set (\$5.00). Examination copies of the measures and handbooks

INSTRUMENT DESCRIPTION.

Purpose/Content:

To aid individuals in making career and educational plans by comparing their scores on the PCG with those obtained on similar tests taken in high school by persons now engaged in specific occupations. Consequently, individuals taking the PCG may be able to form education and career plans that are more likely to be realized, either because their plans correlate with measured skills and interests or because skills necessary for the desired career may be gained through education.

The testing components of PCG battery include five books: Ability Measures, Interest Inventory, Information Planners. the Examiner's Manual, and the answer document with the Life and Career Plans Report.

The Ability Measures instrument includes separate sections on Reading Comprehension, Mathematics, Abstract Reasoning Creativity, Mechanical Reasoning English, Quantitative Reasoning, Vocabulary, Visualization, and Computation.

ERIC:

#### INSTRUMENT DESCRIPTION:

Purpose/Content:

A self-scored inventory of career-related interests, skills, and experiences designed to stimulate and facilitiate self-career exploration on the part of students. VIESA teaches students a comprehensive structure for organizing information about themselves and the world of work.

The primary goals of VIESA are to help students

expand self-awareness, develop career awareness, iden-

tify personally relevant career options, and begin to

explore and evaluate their career options. Self-Awareness, Career Awareness, Career

Opportunities

Number of Items:

Type of Item:

**Descriptors:** 

Intended Population: Age or Grade Level:

Forms:

Domain:

Two 60-item inventories and a 16-item rating scale Self-report of career-related interests and experiences

Students

Grades 8-12

Cognitive and affective

**EXAMPLE ITEM:** 

This is a copyrighted test: therefore, an example item is not presented. Students complete and score the Uni-Sex ACT Interest Inventory, rate their career interests, skills, and current occupational choices on 25 job families spanning the world of work. In an optional component, they complete and score a 60-item inventory of

work-related activities and experiences. Their results are then integrated with the other VIESA Components through the use of the data, ideas, people, and things work task dimensions. The Students' Career Log and Career Guidebook contains all the inventories, exercises,

and career exploration aids.

**ADMINISTRATION:** 

Time:

Typically takes 40-45 minutes to complete 6 basic components. Subsequently, students work on their own.

Response Mode:

**COMMENTS:** 

COPE'S goal is to improve the quality and availability of occupational education in California community colleges. Its function is to help a college assess "what is" in relation to "what is desirable" in occupational

education. The COPES evaluation has been developed and refined by community college instructors, counselors, administrators, students, and advisory committee members, as well as men and women from business and industry. The system includes guides, six (6) self-study instruments, and a summary profile (Form 7). The six self-study instruments are to be completed as follows:

Form 1: College president or his/her designee

S

Form 2: Full-time day occupational education teachers, department heads, and division chairmen

Form 3: College generalists (e.g., dean of instruction, dean of student services, chief occupational education administrator, counselors)

Form 4: Continuing education faculty in occupational field

Form 5: Occupational education students

Form 6: Occupational education advisory committees

The entire system requires approximately 3 1/2 months to complete.

**EXAMPLE ITEM:** 

Domain:

Competencies and Skills Profile

This learning activity should help you identify competencies and skills used in your job performance.

- 1. List the job titles, 1, 2, 3, 35c., across the top.
- 2. Think of the competencies and skills you demonstrated in each job.
- List the competencies and skills under each job according to the way they were being used: Persons, Data, Things.

	1	2	3	4	5	6	7	8	
Persons	•	•	•	•	•	•	•	•	<del></del>
Data	•	•	•	•	•	•	•	•	<del></del>
Things	•	•	•	•	•	•	•	•	

After completing the listing of skills for each job, draw a circle around the dot in the box that has the set of competencies and skills in which you excalled in that job.

Draw a line connecting the points to profile the use of your competencies and skills.

#### INSTRUMENT DESCRIPTION:

Purpose/Content:

Follow-up survey of high school graduates designed to obtain detailed information from a population of 1972 graduates of the two Pontiac high schoole which participated in cooperative education programs and a control population who did not participate in such programs. Its stated purposes were to determine what the graduates had been doing in terms of employment, determine their satisfaction with employment and high school programs, and determine the relationship between program costs and their benefits to high school

**Descriptors:** 

Educational Career Relationships, Job Satisfaction,

Follow-Up

Number of Items:

Type of Item:

31

Likert-type attitude scales, forced choice (yes-no). fill in answers (biographical/occupational information), and

open ended comments High school graduates

Intended Population: Age or Grade Level:

Forms: Domain: Adults

Cognitive and affective

**EXAMPLE ITEM:** 

How satisfied are (were) you with this job? Satisfied ..... 2 Neither satisfied nor dissatisfied ...... 3 Very dissatisfied ...... 5

COMMENTS:

This package of materials incorporates a four-step method to make career education inservice programs more responsive to the interests and needs of teachers and other education personnel. Step 1 consists of assessing teachers' attitudes and changes in attitudes toward inservice. Step 2 is a survey of general inservice needs related to career education. Step 3 encompasses

assessing the strengths and weaknesses of participants, objectives/competencies to emphasize, and the instructional method to utilize for the inservice. Step 4 involves the design and implementation of a planned inservice program based on data gathered in the previous steps. These materials are mentioned in the Oregon ASCD Curriculum Bulletin under the title "Aids to Integrating Career Education Into the Educational Program," (Vol. XXX, No. 330), January 1976.

### INSTRUMENT DESCRIPTION:

**Purpose/Content:** 

Self-assessment of career education programs by schools and/or districts. The assessment guide is used by various schools and/or districts for self-assessment of their career education programs. Assessment conclusions are based on an uncontrolled environment usually by inexperienced personnel. The guide is developed into 4 parts: (1) administration, (2) personnel, (3) school and community relations, and (4) curriculum. Each part has a set of criteria statements followed by numerical rating scale and a space for comments. The numeric value assigned to each part is then transferred to profile shoots located at the and of the guide.

sheets located at the end of the guide.

### Validity:

#### **COMMENTS:**

System validity was established through user feedback.

COPES' goal is to improve the quality and availability of occupational education in California community colleges. Its function is to help a college assess what is in relation to what is desirable in occupational education. The COPES evaluation has been developed and refined by community college instructors, counselors, administrators, students, and advisory committee members, as well as men and women from business and industry. The system includes guides, six self-study instruments, and a summary profile (Form 7). The six self-study instruments are to be completed as follows:

- Form 1: College president or his/her designee
- Form 2: Full-time day occupational education teachers, department heads and division chairperson
- Form 3: College generalists (e.g., dean of instruction, dean of student services, chief occupational education administrator, counselors)
- Form 4: Continuing education faculty in occupational field
- Form 5: Occupational education students
- Form 6: Occupational education advisory committees

The entire system requires approximately 3 1/2 months is complete.

## INSTRUMENT DESCRIPTION:

Purpose/Content:

To assist staff members in evaluating career development materials. The categories of evaluation criteria include: (1) technical considerations, (2) scope, (3) validity of materials in terms of need, (4) methodology, (5) authenticity, (6) viewpoint, and (7) special considerations. These criteria are relevant to the concerns of all local education agency personnel involved with career

development instructional programs.

ERIC:

## INSTRUMENT DESCRIPTION:

Purpose/Content:

To provide a way for local education agencies to assess what aspects of career education are already developed, or need development, and which of these have the highest priority in a local school. Results of assessment will allow a local school to set goals for development of those aspects of career education which the assessors feel are most important and can be developed with

available resources.

Descriptors:

Number of Items:

Needs Assessment, Curriculum Planning

6 Assessment Forms (60 items/10 each), Community

Partnership Checklist (18 items), and a Summary Profile

form (10 items)

Type of Item:

Intended Population:

Program assessment High school educators

Age or Grade Level:

ade Level: Adults

Forms:

Six assessment forms (1 for each career education goal), goal prioritizing forms, a community partnership checklist, and a summary profile form to graphically display the school system's career education development level in a one-page format. The system also includes a conceptual framework for high schools involving 13 comprehensive goals with a list of general conditions that should be met if each goal is to be

achieved.

Domain:

Cognitive and affective

EXAMPLE ITEM:

Students exiting the school are equipped with decision-making skills.

Yes Work No N/A

1. This is a formally approved goal of the school.

## **COMMENTS:**

This package of materials incorporates a four-step method that can be utilized to make inservice programs more responsive to the interests and needs of teachers and other education personnel. Step 1 consists of assessing teachers' attitudes and changes in attitudes toward inservice. Step 2 is a survey of general inservice needs in a specific area such as career education. Step 3 encompasses assessing the strengths and weaknesses of participants, objectives/competencies to emphasize, and the instructional method to utilize for the inservice. Step 4 involves the design and implementation of a planned inservice program based on data gathered in the previous steps. These materials are mentioned in the Oregon ASCD Curriculum Bulletin under the title "Aids to Integrating Career Education into the Educational Program" (Vol. XXX, No. 330), January 1976.

COMMENTS:

This package of materials incorporates a four-step method to make career education inservice programs more responsive to the interests and needs of teachers and other education personnel. Step 1 consists of assessing teachers' attitudes and changes in attitudes toward inservice. Step 2 is a survey of general inservice needs related to career education. Step 3 encompasses assessing the strengths and weaknesses of participants.

objectives/competencies to emphasize, and the instructional method to utilize for the inservice. Step 4 involves the design and implementation of a planned inservice program based on data gathered in the previous steps. These materials are mentioned in the Oregon ASCD Curriculum Bulletin under the title "Aids to Integrating Career Education into the Educational Program" (Vol. XXX, No. 330), January 1976.

#### **EXAMPLE ITEM:**

#### B. Sense of Well-Being

Seems to have a sense of security and well-being. Enjoys life. Genuinely happy and cheerful, positive and optimistic. Easy-going, relaxed, natural and spontaneous. Does not worry or become despondent or depressed. Is not at all tense or nervous. Has a healthy sense of humor.

Seems neither to be very happy, cheerful, positive, and optimistic nor unhappy, depressed, or negative and pessimistic. Has about as many good days as bad days. In general is neither easy-going and relaxed or tense and nervous. Is somewhat concerned about personal problems, but not to the point of interfering with his school work and other activities.

Unhappy or sad most of the time. Rarely smiles. Worries a lot. 4
Becomes despondent or depressed. Is easily discouraged. Anxious, 3
nervous, and tense. Negative and pessimistic. Laughs very little or 2
inappropriately. May become hysterical. Easily frightened. Thinks 1
about self and problems most of the time. Unable to become seriously involved in other problems, tasks, or projects.
